The 2010 AHA Guidelines for CPR and ECC once again emphasize the need for high-quality CPR, including • A compression rate of at least 100/min (a change from "approximately " 100/min) • A compression depth of at least 2 inches (5 cm) in adults and a compression depth of at least one third of the anterior- posterior diameter of the chest in infants and children (approximately 1.5 inches [4 cm] in infants and 2 inches [5 cm] in children).

Highlights of the - American Heart Association

Summary of CPR steps for adults, children and infants. With the 2010 CPR Guidelines. 30:2. Push hard, push fast. Essentials you need to know. In October 2010 the International Liaison Committee on Resuscitation (ILCOR) and the American Heart Association (AHA) released changes to the Guidelines for CPR & Emergency Cardiovascular Care (ECC). The objective of the changes is to make it easier for rescuers and health care providers alike to learn, remember and perform better CPR.

With the 2010 CPR Guidelines Push hard push fast

In the new 2010 guidelines this has changed to " if you are not trained to, or are unwilling to give rescue breaths..." ' This makes it clear that if you are not trained in CPR, chest compressions only is better than no CPR at all, though victims of drowning and children will have little or no oxygen in the blood at the point of cardiac arrest, so for these casualties rescue breaths are ...

2010 Resuscitation Guidelines - REAL First Aid

Since Guidelines 2010 there have been three large RCTs enrolling 7,582 patients that have shown no clear advantage for the routine use of automated mechanical chest compression for OHCA using the Lund University Cardiac Arrest System (LUCAS) 113,114 and AutoPulse devices. 115 Ensuring high quality chest compressions with adequate depth, rate and minimal interruptions, regardless of whether they are delivered by machine or human, is important. 116,117 Mechanical compressions usually follow a ...
