(8.4.1) – Solving rational equations by clearing denominators Equations that contain rational expressions are called rational equations. For example, $\frac{2x+1}{4} = \frac{7}{x+1}$ is a rational equation. Rational equations can be useful for representing real-life situations and for finding answers to real problems.

12.1 Introduction to Rational Expressions

The 8's cancel out and we get this in lowest terms as $1/3$. The same exact idea applies to rational expressions. These are rational numbers. Rational expressions are essentially the same thing, but instead of the numerator being an actual number and the denominator being an actual number, they're expressions involving variables.
