Google Web Toolkit GWT Java AJAX Programming: A step-by ...

Ajax is a set of web development techniques using many web technologies on the client side to create asynchronous web applications. With Ajax, web applications can send and retrieve data from a server asynchronously without interfering with the display and behaviour of the existing page. By decoupling the data interchange layer from the presentation layer, Ajax allows web pages and, by extension, web applications, to change content dynamically without the need to reload the entire page. In fact

Ajax (programming) - Wikipedia

Welcome to the official authors' companion web site for Web Programming Step by Step, 2nd edition. This textbook is designed for use in an introductory web programming course for students who have had a bit of prior introduction to programming (CS1-equivalent) or more. Web Programming Step by Step is written for a broad audience with material that has been used in the classroom with hundreds of undergraduates at the University of Washington, most of whom were not computer science majors.

Web Programming Step by Step, by Marty Stepp, Jessica ...

The browser performs a JavaScript call to the Ajax engine. In other words, create an XMLHttpRequest object. In the background, an HTTP request is made to the server and the appropriate data is retrieved. HTML, XML, or JavaScript data is returned to the Ajax engine which then delivers the requested data to the browser.

What Is Ajax Programming - Explained - KeyCDN Support

Ajax Web Applications • Ajax applications add a layer between the client and the server to manage communication between the two • Step 1: When the user interacts with the page, the client creates an XMLHttpRequest object to manage a request • Step 2: The XMLHttpRequest object sends the request to the server (Step 2) and awaits the response. The requests are asynchronous, so the user can ...
