Algebra is essential knowledge for a high school student trying to meet Common Core Standards. Algebra is a branch of mathematics that uses letters and other symbols in equations to represent unknown values and then uses what is known to figure out what is unknown. For example, if $5x = 40$ (that is, 5 multiplied by x equals 40), you know that $x = 8$ because given what we've been told — the known information — 5 is the only number that makes the number sentence true ($5 \times 8 = 40$).

Common Core Math Standards. 5.OA.1 - Use parentheses, brackets, or braces in numerical expressions, and evaluate expressions with these symbols. 5.OA.2 - Write simple expressions that record calculations with numbers, and interpret numerical expressions without evaluating them. For example, express the calculation “add 8 and 7, then multiply by 2” as $2 \times (8 + 7)$.

~~Algebra 1 Common Core Standard Edition Answers~~

An Overview of Common Core Algebra. By Christopher Danielson. In a Common Core classroom, seventh grade students use algebra to describe their understanding of mathematical relationships in the world. They also learn to state patterns and structure that appear in their arithmetic, and to notice and state new relationships. In seventh grade, most of these relationships are proportional, which means that there is a constant rate of change in one variable relative to another.
