An Efficient Approach to Clustering in Large Multimedia Databases with Noise. Several clustering algorithms can be applied to clustering in large multimedia databases. The effectiveness and efficiency of the existing algorithms, however, is somewhat limited, since clustering in multimedia databases requires clustering high-dimensional feature vectors and since multimedia databases often contain large amounts of noise.

Consequently, high efficiency perovskites are usually prepared in dry/inert environments, which are expensive and less convenient for scale up purposes. Here, a new approach based on the inclusion of an in situ polymerizable ionic liquid, 1,3-bis(4-vinylbenzyl)imidazolium chloride ([bvbim]Cl), is presented, which allows perovskite films ...

Being efficient does not mean that you accomplish more work in less time, ignoring the quality of work. Never compromise on quality. Employees need to concentrate on work not only to deliver results on time but also yield high quality output. An employee is said to be efficient only when he accomplishes assigned tasks on time, with minimum errors.

Abstract: A simple and efficient randomized algorithm is presented for solving single-query path planning problems in high-dimensional configuration spaces. The method works by incrementally building two rapidly-exploring random trees (RRTs) rooted at the start and the goal configurations. The trees each explore space around them and also advance towards each other through, the use of a simple greedy heuristic.

In this study, a facile and efficient approach to increase the magnetic property of metal-organic framework-5 (MOF-5) has been investigated. The basis of this approach is the encapsulation of cluster-oxygen composition (i.e. ZnO in MOF-5) during the synthesis process of MOF-5 to form [email protected] nanocrystals. Both MOF-5 and [email protected] were synthesized for comparison purposes ...
