"How do we, as human beings, come to understand ourselves and others around us? This question couldn't be more timely or pertinent to the issues facing humanity today. At the heart of most of our world's most troubling political and social problems lies a divergence in perspectives between nations and/or cultural groups. For example, how should we characterize the seemingly intractable divide between Indians and Pakistanis? What lies at the heart of the constant misunderstanding between Israelis and Palestinians? How has the political divide in the United States taken on such polemic divisions? How are we to make sense of the baffling resistance certain groups of people in many nations have to the overwhelming evidence of global climate change? In essence, the divergences in all of these perspectives are related to fundamentally different ways in which groups value their existence and construct a meaningful picture of who they are in relation to others. By drawing on multidisciplinary approaches to social psychological phenomena illustrated in these examples, this book draws together a number of cutting edge researchers and practitioners in psychology and related fields. The discussions in this book both review some of the most significant debates concerning how different groups come to share meanings, and radically advance this discussion in impactful new directions.
