Applications of fuzzy Laplace transforms Salahshour, S.; Allahviranloo, T. 2012-08-12 00:00:00 A natural way to model dynamic systems under uncertainty is to use fuzzy initial value problems (FIVPs) and related uncertain systems. In this paper, we express the fuzzy Laplace transform and then some of its well-known properties are investigated.

In this paper we propose a fuzzy Laplace transform and under the strongly generalized differentiability concept, we use it in an analytic solution method for some fuzzy differential equations (FDEs). The related theorems and properties are proved in detail and the method is illustrated by solving some examples.

To study a first-order fuzzy initial value problem, in 2010 Allahviranloo and Ahmadi introduced the fuzzy Laplace transform, which was defined by means of the improper fuzzy Riemann integral . Many researchers have studied the properties and applications of the fuzzy Laplace transform , , , . However, the existing results on the fuzzy Laplace transform and their applications were based on Zaheh's decomposition theorem and were formally characterized by the integrals of real-valued functions ...

One of the interesting transforms in the theory of fuzzy differential equations is Laplace transforms. The fuzzy Laplace transform method solves FFDEs and corresponding fuzzy initial and boundary value problems. In this way, the fuzzy Laplace transforms reduce the problem of solving a FFDE to an algebraic problem.

In this paper, we solve the fuzzy heat equations under strongly generalized H-differentiability by fuzzy Laplace transforms. To this end, the original fuzzy heat equation is converted to the corresponding fuzzy two point boundary value problem (FBVP) based on the fuzzy Laplace transform. Then, we will solve the obtained FBVP using characterization theorem. Finally, some numerical examples are given to illustrate the utility of the fuzzy Laplace transform method.

Laplace transforms are frequently opted for signal processing. Along with the Fourier transform, the Laplace transform is used to study signals in the frequency domain. When there are small frequencies in the signal in the frequency domain then one can expect the signal to be smooth in the time domain.
