This law states that the same number of atoms should be present on both sides of the chemical equation. One of the easiest ways to balance the chemical equation is to look for an element that has only one reactant and product. Once that one element is balanced, you can proceed towards balancing the other one.

49 Balancing Chemical Equations Worksheets (with Answers)

Every balanced chemical equation consists of two parts: the reactant side and the product side. Both of these sides are separated by the means of an arrow. On the left side of the arrow, you will find the reactant side. This side represents the elements which are used for initiating the experiment.
