SPM12. Introduction. Brain normalization is the rigid rotation and/or deformation of a 3D brain scan so that it can match a template brain. This is a necessary step for the analysis of brain magnetic resonance data (whether it is morphological or functional) as well as of brain PET data. It allows introducing a set of spatial coordinates such ...

The master's program in bioinformatics is a direct response to a paradigm shift taking place in medicine and biological sciences. Further research in these areas rests on the evaluation of masses of biological data: here, the use of computers, combined with accurate mathematical models and efficient algorithms is essential.

Abstract. La recerca en biologia no es pot entendre avui sense la computació. A causa, sobretot, del desenvolupament de les tecnologies genòmiques, la biologia ha passat en molt poc temps, de ser una ciència en la qual l'esforç humà s'orientava principalment envers l'obtenció d'unes poques dades, a ser una ciència que genera un volum enorme de dades sense pràcticament intervenció humana.

We set up a fast approach to debias impurity-based variable importance measures for classification, regression and survival forests. We show that it creates a variable importance measure which is unbiased with regard to the number of categories and minor allele frequency and almost as fast as the standard impurity importance.

Structural variations (SVs) are large genomic rearrangements that contribute to genomic diversity as well as genomic disorders. 4 Due to their varying lengths, SVs are difficult to detect accurately, especially when analyzing the relatively short reads generated by next-generation sequencing (NGS).
