Chapter 14. Linear least squares 1 Simple linear regression model A linear model for the random response $Y = Y(x)$ to an independent variable $X = x$. For a given set of values (x_1, \dots, x_n) of the independent variable put $Y_i = 0 + 1x_i + \epsilon_i$; $i = 1, \dots, n$; assuming that the noise vector $(\epsilon_1, \dots, \epsilon_n)$ has independent $N(0, \sigma^2)$ random components. Given the data (y_1, \dots, y_n)
