Concept 31.5 Fungi have a powerful impact on ecosystems and human welfare. Ecosystems depend on fungi as decomposers and symbionts. Fungi are important decomposers of organic material, including cellulose and lignin of plant cell walls. Fungi and bacteria are essential for providing ecosystems with the inorganic nutrients responsible for plant growth.

Read Online Chapter 23 Fungi

Mycorrhizal fungi are essential for the growth of most plants. Fungi, as food, play a role in human nutrition in the form of mushrooms, and also as agents of fermentation in the production of bread, cheeses, alcoholic beverages, and numerous other food preparations.
