Chapter 2 The Osi Model

In the networking environment, the OSI is the universal model and is made up of seven layers, each layer providing a service to the layer above it and dependent on the layer below. These seven layers are as follows:

Layer 7? Application. Layer 6? Presentation.
Layer 5? Session. Layer 4? Transport. Layer 3? Network. Layer 2? Data link. Layer 1? Physical

Acces PDF Chapter 2 The Osi Model And The Tcp Ip Protocol Suite

1.2 Specify the main features of 802.2 (LLC), 802.3 (Ethernet), 802.5 (Token Ring), 802.11b (wireless), and FDDI networking technologies, including: Speed. Access. Method. Topology. Media.

2.1 Given an example, identify a MAC address.

2.2 Identify the seven layers of the OSI model and their functions.

2.3 Differentiate between the following network protocols in terms of routing, addressing schemes, interoperability, and naming conventions:
