Transport of Water, Mineral Ions and Nutrients in the Stem Diffusion and osmosis allow water and mineral nutrients to travel up the xylem from root to leaf. Also root pressure and capillary action aid in this. Diffusion and osmosis also allow the two-way movement of nutrients such as sugar through the phloem.

The circulatory system transports nutrients to cells and transports wastes from them. The essential minerals sodium, potassium, calcium, and chloride, and the macronutrients protein and carbohydrates, are required for central nervous system function. Fat is also critical for central nervous system function (see the Discussion Starter below).

The exception to this is trans fatty acids, which are unsaturated in terms of their structure but behave in the body like saturated fatty acids. Fat provides energy; 1 gram provides 37 kJ (9 kcal). Foods that contain a lot of fat provide a lot of energy. Fat is a carrier of fat-soluble vitamins and is necessary for their absorption.
