5.1 Use dressing that maintains a moist wound healing environment. 5.2 Use clinical judgment to select moist wound dressing that facilitates continued moisture. Wet-to-dry dressings are not considered continuously moist and are an inappropriate wound dressing selection. 5.3 Select dressing to manage exudates and protect peri-wound skin.

In 2003, the Wound Healing Foundation (WHF) and president Dr. Elof Eriksson determined that standards based on evidence should be developed specific for wound healing. The Foundation knew that chronic wounds were and would continue to be a financial and medical burden as the elderly population grew. The lack of uniformly accepted diagnostic methods to evaluate outcomes on clearly defined, comprehensive wound care standards made the treatment and management of chronic wounds less likely to ...

Sterile gauze dressings are the standard to which other wound care products are compared. 4 Wet-to-dry packing consists of moistened gauze placed into the wound with changes at least once daily, which provides debridement. This technique is widely used but can result in a dehydrated wound bed, preventing granulation and matrix regeneration.
