Modern concrete homes are made using a combination of cement, water, sand, and stone aggregates. This is also combined with various chemical properties so that the material becomes strong and durable. Usually, though, concrete homes are made in much the same way that regular houses are made.

4 Types of Modern Concrete Homes (Plus Costs, Pros, Cons ...

Concrete houses, including those built with a steel frame or cast on-site, are considered non-standard construction houses as they are not built with conventional brick or timber frame structure and should be professionally surveyed prior to purchase. The concrete can be prone to defects, leading to structural issues later on.

Concrete home advice | Pros & Cons of Concrete Houses ...

But what are the pros and cons of building homes using concrete? Firstly, concrete blocks are ideal for foundations and basement walls because they're stronger than poured concrete. Partition walls in any home can be put up quickly using concrete blocks, and their cores or voids can be filled with steel reinforcing rods and concrete for additional strength.

Advantages & disadvantages of concrete houses

Home / Building Technology Guide Precast concrete construction system has its own characteristics which influence the layout, span length, construction depth, and stability system to a great extent. In precast concrete construction, majority of structural members are manufactured in manufacturing plants away from the construction site.

Methods of Precast Concrete Constructions

Concrete Houses - Bob Vila

Precast concrete offers durable, flexible solutions for floors, walls and even roofs in every type of domestic construction from individual cottages to multi-storey apartments. Concrete ' s high initial embodied energy can be offset by its extended life cycle (up to 100 years) and high potential for reuse and relocation.

Precast concrete | YourHome

Concrete Homes: Strong, Versatile and Durable. Concrete homes offer features that purchasers and builders value; strong and solid construction that provides comfortable shelter from typical weather, and minimizes property damage while protecting occupants from extreme weather and natural disasters. Yet strength and durability alone are not enough: the systems have to be easy to design and build and be versatile to suit any architectural style.

Concrete Homes - Portland Cement Association

A concrete roof is exactly what it sounds like: a solid slab of concrete capping the top of your house. Exact specifications vary, but most concrete roofs are several inches thick. For example, the Florida-based company Hurricane Proof Systems offers a 7-inch (18-centimeter) slab of concrete in three layers.
