Solid propellant slurry is produced by mixing oxidizer powder, metallic fuel powder, prepolymer and additives. For ammonium perchlorate (AP)-based propellant, which is the most widely used solid propellant, aluminum powder is used as a fuel.

The Continuous Mixing Process of Composite Solid ...

in this study the mixing of a composite solid propellant production was investigated usually propellant is mixed in batches during multi batch processing in this work we demonstrated that continuous mixing with a peristaltic pump containing an artificial muscle actuator could replace batch mixing resulting in a safe efficient manufacturing process in continuous mixing systems it is
