Introduction to Fire Alarm Systems 2Conventional Zone Fire Alarm Control

Conventional Fire Alarm Addressable Fire Alarm: The fire alarm system where the each detector is connected using separate parallel circuit to the control panel. The fire alarm system where the detectors are connected using a single loop of wire to the main control panel. The detectors inside a circuit cannot be distinguished from each other.

Difference Between Conventional and Addressable Fire Alarm

Conventional Fire Alarms panels are simple to fit and in general require no programming to set up, options include traditional "4 wire" systems where sounders and detectors are wired separately to more modern "2 wire" systems where sounder, detectors and call points are wired on one single cable. With a wide choice of options from 2 zone to 8 zone, polycarbonate, metal casing, flush mount, surface mount, repeater panel or stand alone there is a conventional fire panel to suit every situation.
