Data As A Service A

In computing, data as a service, or DaaS, is enabled by software as a service. Like all "as a service" technology, DaaS builds on the concept that its data product can be provided to the user on demand, regardless of geographic or organizational separation between provider and consumer. Service-oriented architecture, and the widespread use of API, has rendered the platform on which the data resides as irrelevant. DaaS began primarily in Web mashups and, since 2015, has been increasingly employed

Data as a service - Wikipedia

Data as a service (DaaS) is a data management strategy that uses the cloud to deliver data storage, integration, processing, and/or analytics services via a network connection. DaaS is similar to software as a service, or SaaS, a cloud computing strategy that involves delivering applications to end-users over the network, rather than having them run applications locally on their devices.

What is Data-as-a-Service (DaaS)? | Talend
Data as a service (DaaS) is a cloud strategy used to facilitate the accessibility of business-critical data in a well-timed, protected and affordable manner. DaaS depends on the principle that specified, useful data can be supplied to users on demand, irrespective of any organizational or geographical separation between consumers and providers.
