When it comes to dental implants, however, a prosthetic refers to an artificial tooth. By definition, a prosthetic is an artificial part of the body, and when you are discussing a dental implant prosthetic, you are referring to two different parts, the metal insert that connects to the jawbone and the actual tooth itself. Titanium is tops

TRI® presents a new version of its prosthetic kit that contains all the instrumentation for the restoring dentist to handle healing components and to place provisional and final restorations. The new prosthetic kit features the same grommet-less technology like the TRI® Surgical Kit, validated for automated cleaning in washer-disinfection machines. The workflow has been streamlined, and the improved versions of the prosthetic drivers are now also included in the prosthetic kit.

TRI Dental Implants: Prosthetics
A dental prosthesis is an intraoral (inside the mouth) prosthesis used to restore (reconstruct) intraoral defects such as missing teeth, missing parts of teeth, and missing soft or hard structures of the jaw and palate. Prosthodontics is the dental specialty that focuses on dental prostheses.

Dentures are made of either acrylic (plastic) or metal. A 'complete' or 'full' denture is one which replaces all the natural teeth in either the upper or lower jaws. A 'partial' denture fills in the spaces left by lost or missing teeth. It may be fastened to your natural teeth with metal clasps or 'precision attachments'.

Dental Prosthetics – GRANDHOLM
A custom computer milled framework of titanium is used to provide optimal strength and hygiene access for an acrylic tooth prosthesis. The acrylic teeth are milled from a single piece of acrylic for a strong, durable and esthetic restoration. This prosthesis is generally recommended for the lower jaw.
