Elements of Probability and Statistics.

Probability Theory provides the mathematical models of phenomena governed by chance.

Examples of such phenomena include weather, lifetime of batteries, traffic congestion, stock exchange indices, laboratory

measurements, etc. Statistical Theory provides the mathematical methods to gauge the accuracy of the probability models based on observations or data.

Conditional probability-2. Formally the conditional probability is given as  $p(A|B) = \frac{p(A \cap B)}{p(B)}$  Notice how this works for rolling a 3. Since rolling a 3 and rolling an odd number are dependent, the probability of rolling a 3 AND odd is the same as rolling a 3.  $p(3|odd) = \frac{p(3 \cap odd)}{p(odd)} = \frac{1/6}{1/2} = 1/3$ .
