Mercury Marine's 250 Four Stroke: Editor's choice for repowering the project boat. It is a 4.6L V-8, weighing about 530 pounds, and boasting an 85-amp alternator and a slick access port for checking engine oil. It is compatible with SmartCraft technology.

Engine Repower 2020: Part 1 | Boating Magazine

After activating the starter motor to start the engine, charge rate will typically be high as the alternator replaces the energy used by the starter. The charge rate will reduce slowly as the battery state of charge levels off. This means that test specifications can be a moving target.

Step 1 Remove bolts and wire. Push the metal tab closest to the black wire down. While pushing the tab down, pull the black wire out of the clip. Using a 1/4 socket, remove the two bolts holding the alternator to the engine. From the alternator side, gently pull the black wire out past the cylinder it is routed under on the engine.
