Experimental work in drainage basin evolution, hydrology, river-channel morphology, and sedimentology. These investigations are related to real-world applications, particularly geological exploration and mapping. This text shows how awareness of natural phenomena can improve management of the natural environment, such as the control of rivers and eroding gullies.

Researchers can choose among a range of facilities and techniques ranging from the smallest flume to the largest outdoor facility and study a wide variety of problems in fluvial morphology. This chapter provides some examples of experimental studies especially relevant to stream management and restoration, focusing on geomorphology and physical processes.

Experimental studies and practical challenges in fluvial ...

A little experimenting with the Em2 stream table. Now with a simpler and more effective automated sediment delivery system.

Description. Fluvial Geomorphology studies the biophysical processes acting in rivers, and the sediment patterns and landforms resulting from them. It is a discipline of synthesis, with roots in geology, geography, and river engineering, and with strong interactions with allied fields such as ecology, engineering and landscape architecture.
