fouling control, count to three In an ideal world, there should be nothing on your hull but water. Unfortunately, the marine environment is full of harmful organisms that create drag and corrosion, costing you time and money. Hempel has developed a broad range of fouling control products offering exceptional clean hull performance for up to 90 months.

Hempel's Antifouling Olympic+ 72950 is a high solids, self-polishing antifouling. The robust rosin technology combined with a good biocide package ensures predictable antifouling protection. The use of patented microfibre technology ensures superior mechanical strength to avoid cracking and peeling and reduces maintenance costs during repair.

Fouling control coatings can make a significant contribution to the operational efficiency of tankers, helping maintain a smooth and foul-free underwater hull. These coatings also deliver benefits such as extending dry dock intervals and improve the reputation of the shipping industry via a reduction in emissions (via reduced fuel consumption).

Fuel efficiency and fouling control coatings in maritime ...

We left the backs of our test boards as bare primer to act as a control. The good news is that without exception, every antifouling paint showed a marked improvement compared to the bare panels. Fouling differed in a big way between each of our 13 locations, from Dunstaffnage, which had minimal growth, to Hamble, which showed by far the worst.
