thermodynamics has much wider applicability. In material science, one is normally not that interested in heat and work, but interested more the state of matter and how things might change when mixed, heated, pressurized, etc. Some important effects are chemical reactions (such as oxidation), formation of solutions, phase transformations.

Online Library Thermodynamics Gaskell Solution the first law as $w = q - \Delta U$; thus $q = \Delta H$; $w = \Delta H - \Delta U$; 4. Isothermal Process Because U is a function only of T for an ideal gas, $\Delta U = \Delta H = 0$ for an isothermal process. These results also follow from the general results by using $D(T) = D(PV) = 0$ for an isothermal process.
