Geometry Definitions, Postulates, and Theorems

Definitions, theorems, and postulates are the building blocks of geometry proofs. With very few exceptions, every justification in the reason column is one of these three things. The below figure shows an example of a proof. If this had been a geometry proof instead of a dog proof, the reason column would contain if-then definitions, theorems, and postulates about geometry

Geometry Properties, Postulates, Theorems. For every number a , $a = a$. For all numbers a , b & c , if $a = b$ & $b = c$, then $a = c$. (A bit like the law of syllogism) For all numbers a & b , if $a = b$, then a may be replaced by b in any equation or expression. Congruence of segments is reflexive, symmetric, and transitive.
