The study of intrahousehold allocation—that is, understanding how rights, responsibilities, and resources are allocated among household and family members—is a relatively new field of study. The "new household economics" movement of the 1970s expanded the set of individual and household decisions that were examined by economists.

Intrahousehold bargaining and resource allocation in developing countries. Dileni Gunewardena, Gender Training Workshop, Saly, Senegal Sept 4, 2019 Based on Doss (2013) article of the same title, World Bank Research Observer 28 (1): 52-78. A central question [in the bargaining literature] is how different outcomes are affected by women's bargaining position. Doss 2013.

Intrahousehold bargaining and resource allocation in ...

One of the central messages from research on gender is that many key development outcomes seem to depend on women's ability to negotiate favorable intrahousehold allocations of resources. The development literature suggests that women's bargaining power within households is linked to variables such as the health and education of children and the general well-being of women and girls.
