## ~~Introduction To Hierarchical Bayesian Modeling~~

Making statistical modeling and inference more accessible to ecologists and related scientists, Introduction to Hierarchical Bayesian Modeling for Ecological Data gives readers a flexible and effective framework to learn about complex ecological processes from various sources of data. It also helps readers get started on building their own statistical models.

Bayesian hierarchical modeling can produce robust models with naturally clustered data. They often allow us to build simple and interpretable models as opposed to the frequentist techniques like ensembling or neural networks that are commonly used for such complex data.

This course will cover introductory hierarchical modelling for real-world data sets from a Bayesian perspective. These methods lie at the forefront of statistics research and are a vital tool in the scientist's toolbox. The course focuses on introducing concepts and demonstrating good practice in hierarchical models.

While previous research has suggested that empirical priors estimated from a separate dataset improve identifiability and predictive accuracy, this paper outlines an alternate method for the derivation of empirical priors: hierarchical Bayesian modeling. We provide a detailed introduction to this method, and show that using hierarchical models to simultaneously extract and impose empirical priors leads to better out-of-sample prediction while being more

A hierarchical model provides a compromise between the combined and separate modeling approaches. In Section 10.2, a hierarchical Normal density was used to model mean rating scores from different movies. In this setting, one builds a hierarchical model by assuming the hospital death rate parameters a priori come from a common distribution. Specifically, one builds a hierarchical model based on a common Beta distribution that generalizes the Beta-Binomial conjugate model described in Chapter 7.

A great book I've found is "Introduction to Hierarchical Bayesian Modeling for Ecological Data" by Parent and Rivot 1. While at the FDA I code my own model without using any MCMC framework and it was very slow in R. I realize I need a MCMC framework under my toolbelt. After some research I decided on Stan using the rstan r package.
