Probability is starting with an animal, and figuring out what footprints it will make. Statistics is seeing a footprint, and guessing the animal. Probability is straightforward: you have the bear. Measure the foot size, the leg length, and you can deduce the footprints.

A probability of one represents certainty: if
you flip a coin, the probability you'll get
heads or tails is one (assuming it can't land
on the rim, fall into a black hole, or some
such). The probability of getting a given
number of heads from four flips is, then,
simply the number of ways that number of

MAS131: Introduction to Probability and
Statistics

This updated text provides a superior introduction to applied probability and statistics for engineering or science majors. Ross emphasizes the manner in which probability yields insight into statistical problems; ultimately resulting in an intuitive understanding of the statistical procedures most often used by practicing engineers and scientists.
