The Stirling engine is a heat engine that is vastly different from the internal-combustion engine in your car. Invented by Robert Stirling in 1816, the Stirling engine has the potential to be much more efficient than a gasoline or diesel engine. But today, Stirling engines are used only in some very specialized applications, like in submarines or auxiliary power generators for yachts, where ...

A Stirling engine is a heat engine that is operated by the cyclic compression and expansion of air or other gas (the working fluid) at different temperatures, resulting in a net conversion of heat energy to mechanical work. More specifically, the Stirling engine is a closed-cycle regenerative heat engine with a permanent gaseous working fluid. Closed-cycle, in this context, means a ...

En varmluftmotor med en gas, som undergår en Stirling-kredsproces, kaldes en Stirlingmotor. Stirlingmotoren er en ekstern forbrændingsmotor opfundet i 1816 af Robert Stirling, en skotsk præst, og ingeniør James Stirling. Opfindernes mål var dengang at skabe et sikrere alternativ til dampmaskiner, hvis kedler ofte eksploderede pga. for højt damptryk og primitive materialer.
