Multiplying and Dividing integers | Teaching Resources

This is a basic lesson on multiplying integers for pre-algebra or 7th grade math. I explain where we get the various rules for the SIGNS in integer multiplication, and give examples. For example, a positive times a negative integer can be modeled with counters. $4 \times (-6)$ would be four groups of six negatives.

Integers 16
2 and 4 are positive. In general, when multiplying integers, remember the followings: Positive \times Positive = Positive For example, $7 \times 6 = 42$ $2 \times 5 = 10$ $3 \times 10 = 30$ $8 \times 2 = 16$ Now, try adding -3 to -3 $-3 + -3 = -3 \times 2$ The reasoning is the same; Instead of adding -3 two times, you can just multiply -3 by 2.

Multiplying integers lesson 2 1 answer key

Multiply the integers in the rows and columns and write the products in the squares. Multiplication Squares | 3x3 Get students to multiply the positive and negative numbers in each row and
