Non-volatile  
memory or non-  
volatile storage

is a type of  
computer memory  
that can  
retrieve stored  
information even  
after having  
been power  
cycled. In

contrast,  
volatile memory

include flash

ferroelectric  
RAM, most types

There are five design issues associated with MTJ-based LUT circuits. The first design issue corresponds to the large area overhead of the

due to a small  
difference in  
MTJ resistance.  
To overcome this  
issue, a

structure has  
been proposed to  
reduce the  
overhead  
[18,19,24]. The
