But Eltanin ' s missions were not limited to geophysical work: physical, biological and geological groups, several from Lamont, participated in many of her cruises, occupying more than 1,500 " hydro stations " and making vertical profiles of temperature, salinity, dissolved oxygen and other parameters. The oceanographers also made thousands of bathythermograph casts, took numerous bottom photographs and made measurements of light scattering and ocean currents.

USNS Eltanin (T-AK-270/T-AGOR-8) was an Eltanin-class cargo ship with an ice-breaking hull acquired by the U.S. Navy in 1957 and then operated by the Navy in a non-commissioned status, named after Eltanin, a star in the constellation Draco. Her designation was changed to that of an oceanographic research ship in 1962 when she operated in Antarctic waters

Marine Geology is the premier international journal on marine geological processes in the broadest sense. We seek papers that are comprehensive, interdisciplinary and synthetic that will be lasting contributions to the field. Although most papers are based on regional studies, they must demonstrate new findings of international significance. ...
