

Medusa A Parallel Graph Processing System On Graphics

This is likewise one of the factors by obtaining the soft documents of this **medusa a parallel graph processing system on graphics** by online. You might not require more get older to spend to go to the book instigation as skillfully as search for them. In some cases, you likewise attain not discover the declaration medusa a parallel graph processing system on graphics that you are looking for. It will agreed squander the time.

However below, once you visit this web page, it will be consequently agreed easy to acquire as with ease as download lead medusa a parallel graph processing system on graphics

It will not admit many become old as we tell before. You can complete it even if law something else at home and even in your workplace. as a result easy! So, are you question? Just exercise just what we come up with the money for below as well as review **medusa a parallel graph processing system on graphics** what you with to read!

Medusa is a parallel graph processing system on graphics processors (GPUs). The core design of Medusa is to enable developers to leverage the massive parallelism and other hardware features of GPUs by writing sequential C/C++ code for a small set of APIs. This simplifies the implementation of parallel graph processing on the GPU.

work for parallel graph processing on graphics processors (GPUs). Medusa enables developers to leverage the massive parallelism and other hardware features of GPUs by writing sequential C/C++ code for a small set of APIs. This simplifies the implementation of parallel graph processing on the GPU. The runtime system of Medusa automatically

Parallel Graph Processing on Graphics Processors Made Easy

work named Medusa to simplify programming graph processing algorithms on the GPU. Inspired by the bulk synchronous parallel (BSP) model, we develop a novel graph programming model called "Edge-Message-Vertex" (EMV) for fine-grained processing on vertices and edges. EMV is specifically tailored for parallel graph processing

Medusa: Simplified Graph Processing on GPUs

Medusa offers a small set of user-defined APIs and embraces a runtime system to automatically execute those APIs in parallel on the GPU. We develop a series of graph-centric optimizations based on the architecture features of GPUs for efficiency. Additionally, Medusa is extended to execute on multiple GPUs within a machine.

2.1 Graph Processing. Parallel algorithms have been a classical way to improve the performance of graph processing. On multi-core CPUs, parallel libraries such as MTGL [7] have been developed for parallel graph algorithms. Similar to Medusa, MTGL offers a set of data structures and APIs for building graph algorithms. The
