## *objective c - Memory Management Questions - Stack Overflow*

Objectives of a Memory Management (MM) System. Relocation. Relocatability - the ability to move process around in memory without it affecting its execution . OS manages memory, not programmer, and processes may be moved around in memory. MM must convert program's logical addresses into physical addresses.

# Download File PDF Memory Management Objective

Process's first address is stored as virtual address 0

## *Operating Systems: Lecture 10: Memory Management (1)*

Memory management is the functionality of an os which handles or manages the primary memory and moves the processes back and forth between main memory and disk during an execution. The memory management keeps track of every memory location, regardless of either it is allocated to some process, or it is free.
