Military geology of Tinian, Mariana Islands (Book, 1960 ...

The bulk of geological research in the Northern Mariana Islands has focused on the large, populous island of Saipan. The U.S. Geological Survey first mapped the island in 1956 and it was remapped again in 2007. The oldest rocks exposed at the surface are Eocene volcanic rocks, belonging to the Izu-Bonin-Mariana (IBM) arc system. Saipan is on the frontal arc of the system and experienced periodic uplift and subsidence since then.

The Mariana Islands are an arch of volcanic islands stretching 2500 miles from Guam to Uracas. Coral reefs occur only in the volcanically inactive southern part (Figure 1). Most of the human population lives on Guam and Saipan and the political organization is split into the U.S. Territory of Guam and the Commonwealth of the Northern Mariana Islands.

Military Geology Of Tinian Mariana Islands

The Mariana Islands are a crescent-shaped archipelago comprising the summits of fifteen mostly dormant volcanic mountains in the western North Pacific Ocean, between the 12th and 21st parallels north and along the 145th meridian east. They lie south-southeast of Japan, west-southwest of Hawaii, north of New Guinea and east of the Philippines, demarcating the Philippine Sea's eastern limit. They are found in the northern part of the western Oceanic sub-region of Micronesia, and are politically di
