## **Multinational Banking And Global Capital Markets**

On the one hand, a tightening in global conglomerates' capital reduces the supply of wholesale deposits, which represents a funding shock for US branches. Faced with solvency problems in their foreign branches, European parents use their internal capital market to support profitable lending in their US branches.

## **Global banking, local stress: How multinational banks ...**

Since the presence of foreign banks in emerging economies has increased rapidly in recent years, and since the banking industry has become more global, the importance of internal capital markets in multinational banking has grown, especially, in transmitting financial shocks within financial conglomerates, across global banks, and across countries.

## **Multinational banking and the international transmission ...**

Multinational bank subsidiaries that belong to a financially strong banking group expand their lending faster than subsidiaries that belong to a financially weaker banking group. The first prior reflects the substitution effect: parent banks use their internal capital market to let subsidiaries in fast-growing economies expand lending faster compared with subsidiaries in more slowly developing economies.

Multinational banks are a crucial piece of the puzzle in the flurry of proposals for European financial reform. The size and cross-border operations of these institutions are seen by some as amplifying the effects of wrong management choices and practices and making the current crisis more systemic. That has cast doubts on the viability of this business model in the post-crisis world.

## **Multinational banks and European financial integration ...**

A multinational company can maintain the records of global accounts in a fair manner with the help of international banking. All the transactions of the company are recorded in the books of the banks across the globe. By compiling the data and figures, the accounts of the company can be maintained.
