NB-IoT is a new cellular radio access technology specified by 3GPP in Release 13, Release 14 and Release 15 to address the fast-expanding market for low power wide area connectivity. To achieve global coverage and wide adoption of NB-IoT services, Mobile Network Operators must ensure that devices and end-to-end services from various providers will connect to the NB-IoT systems that have been deployed, and that the data transport capability and connection modes are well understood.

The Deployment Guide for NB-IoT provides information about the frequency bands that are required to guarantee global coverage. In addition, identifying if the device will be deployed mainly outdoors or indoors, or in an urban or rural area, will help to determine if extended coverage is required and also to select the right antenna.

DEVELOPMENT GUIDE FOR INDUSTRIAL USING NB-IoT - GSMA

This GSMA document is the first edition of the NB-IoT Deployment Guide for mobile network operators and application service providers. It identifies a minimum set of key NB-IoT features, details key configurations and considerations for deployments in 2017 and 2018. The Guide has been developed by the NB-IoT Forum as an aid in the deployment of NB-IoT networks and devices globally, to ensure smooth interoperability and roaming.

Narrowband IoT (NB-IoT) is a cellular low-power wide-area (LPWA) connectivity standard that enables IoT devices to send their data directly to the cloud without a gateway in between. By low power, we mean that IoT devices can run on battery for 10+ years. By wide area, we mean that cell coverage is improved so that, for example, smart meters in basements can connect to the network reliably.
