Hamilton Needle Point Style Guide. Several different needle point styles are offered on Hamilton syringe and needle products depending on the application. The correct point style varies depending on the intended application. Below are a few examples of common applications. Manual GC Injections: Historically a Point Style 2 was required to achieve efficient septum penetration with minimized coring.

Flow-through-needle injector The sample manager in the ACQUITY UPLC H-Class system uses a flow-through-needle mechanism that differs radically from the loop-based injector used by the ACQUITY UPLC system. The flow-through-needle mechanism aspirates a sample and holds it in the sample needle in preparation for injecting the sample onto the column.
