Chapter 12 Study Guide (note-taking)- Science Flashcards ... Water erosion is usually caused by rainfall and runoff on a slope. The magnitude of water erosion depends on many factors, including the type of soil, the steepness of the slope, and the amount of vegetation in the area. Water erosion comes in several different forms with various causes.

Note-Taking-Guide-Water-Erosion

1. Surface/Running Water. •It's the major cause of erosion (think of rivers and streams). •When water moves, it carries particles called the load. 2. Ocean Waves. •Waves: caused by wind. –Can break solid rock and throw broken pieces against shore. 2.

Erosion and Deposition

Water erosion is when water moves soil and other natural materials from one spot to another. Four Types of Water Erosion There are four main types of water erosion: inter-rill erosion, rill...

Water Erosion Lesson for Kids—Video & Lesson Transcript...

What Is Water Erosion? •Flowing Water –sediments transported by water appear rounded and smooth –Most influential force in erosion –Transports large objects with fast moving streams –Helps create landforms: •rivers •lakes •oceans

Erosion and Deposition PPT

Moving water is the major cause of erosion that shaped earth's surface. Erosion by water begins with a drop of rain. Some water from the rain is evaporated or soaked up by plants other parts of the rain sinks into the soil. As it starts to rain the force of a raindrop can pick up and loosen soil particles. Water Erosion - Erosion and Deposition

Water Erosion And Deposition Note Taking Answers

Interesting Facts About Water Erosion. Fact 1: A single rainstorm can wash away 5 tons of soil per acre. Fact 2: The water erosion process in the United States moves about 4 billion tons of soil every year. Fact 3: Rivers and streams erode land in three ways depending on the velocity of the water.

Water Erosion: Types, Examples and Facts | Earth Eclipse

Water Erosion Moving water is a major agent of erosion. Water that moves over Earth's surface when it rains is called Runoff. Other than how people use the land, four factors that determine the amount of runoff in an area are: The amount of rain it receives, vegetation (plants there), type of soil, shape of the land
