CACTI - The Easy Tutorial - Introduction

Cacti provides a fast poller, advanced graph templating, multiple data acquisition methods, and user management features out of the box. All of this is wrapped in an intuitive, easy to use interface that makes sense for LAN-sized installations up to complex networks with thousands of devices. Get more details about Cacti.

Cacti® - The Complete RRDTool-based Graphing Solution

Check cacti's poller. First make sure that crontab always shows poller.php. This program will either call cmd.php, the PHP based poller `_or_cactid`, the fast alternative, written in C. Define the poller you're using at Settings, Poller.Cactid has to be implemented seperately, it does not come with cacti by default.

Check cacti's poller

CACTI models the delay/power/area of eight major cache components: decoder, wordline, bitline, senseamp, comparator, multiplexor, output driver, and inter-bank wires. The wordline and bitline delays are two of the most significant components of the access time.

CACTI 6.0: A Tool to Understand Large Caches
