The social practice of forming, shaping, expressing, contesting, and maintaining personal identities makes human interaction, and therefore society, possible. Our identities give us our sense of how we are supposed to act and how we may or must treat others, so how we hold each other in our identities is of crucial moral importance. To hold someone in her identity is to treat her according to the stories one uses to make sense of who she is. Done well, holding allows individuals to flourish personally and in their interactions with others; done poorly, it diminishes their self-respect and restricts their participation in social life. If the identity is to represent accurately the person who bears it, the tissue of stories that constitute it must continue to change as the person grows and changes. Here, good holding is a matter of retaining the stories that still depict the person but letting go of the ones that no longer do. The book begins with a puzzling instance of personhood, where the work of holding someone in her identity is tragically one-sided. It then traces this work of holding and letting go over the human life span, paying special attention to its implications for bioethics. A pregnant woman starts to call her fetus into personhood. Children develop their moral agency as they learn to hold themselves and others in their identities. Ordinary adults hold and let go, sometimes well and sometimes badly. People bearing damaged or liminal identities leave others uncertain how to hold and what to let go. Identities are called into question at the end of life, and persist after the person has died. In all, the book offers a glimpse into a fascinating moral terrain that is ripe for philosophical exploration.

Human beings are primates, and primates are political animals. Our brains, therefore, are designed not just to hunt and gather, but also to help us get ahead socially, often via deception and self-deception. But while we may be self-interested schemers, we benefit by pretending otherwise. The less we know about our own ugly motives, the better - and thus we don't like to talk or even think about the extent of our selfishness. This is "the elephant in the brain." Such an introspective taboo makes it hard for us to think clearly about our nature and the explanations for our behavior. The aim of this book, then, is to confront our hidden motives directly - to track down the darker, unexamined corners of our psyches and blast them with floodlights. Then, once everything is clearly visible, we can work to better understand ourselves: Why do we laugh? Why are artists sexy? Why do we brag about travel? Why do we prefer to speak rather than listen? Our unconscious motives drive more than just our private behavior; they also infect our venerated social institutions such as Art, School, Charity, Medicine, Politics, and Religion. In fact, these institutions are in many ways designed to accommodate our hidden motives, to serve covert agendas alongside their "official" ones. The existence of big hidden motives can upend the usual political debates, leading one to question the legitimacy of these social institutions, and of standard policies designed to favor or discourage them. You won't see yourself - or the world - the same after confronting the elephant in the brain.

Our health care is staggeringly expensive, yet one in six Americans has no health insurance. We have some of the most skilled physicians in the world, yet one hundred thousand patients die each year from medical errors. In this gripping, eye-opening book, award-winning journalist Shannon Brownlee takes readers inside the hospital to dismantle some of our most venerated myths about American medicine. Brownlee dissects what she calls "the medical-industrial complex" and lays bare the backward economic incentives embedded in our system, revealing a stunning portrait of the care we now receive. Nevertheless, Overtreated ultimately conveys a message of hope by reframing the debate over health care reform. It offers a way to control costs and cover the uninsured, while simultaneously improving the quality of American medicine. Shannon Brownlee's humane, intelligent, and penetrating analysis empowers readers to avoid the perils of overtreatment, as well as pointing the way to better health care for everyone.

A NEW YORK TIMES BOOK CRITICS' TOP 10 BOOK OF THE YEAR "In its loving, fierce specificity, this book on how to die is also a blessedly saccharine-free guide for how to live" (The New York Times). Former NEA fellow and Pushcart Prize-winning writer Sallie Tisdale offers a lyrical, thought-provoking, yet practical perspective on death and dying in Advice for Future Corpses (and Those Who Love Them). Informed by her many years working as a nurse, with more than a decade in palliative care, Tisdale provides a frank, direct, and compassionate meditation on the inevitable. From the sublime (the faint sound of Mozart as you take your last breath) to the ridiculous (lessons on how to close the sagging jaw of a corpse), Tisdale leads us through the peaks and troughs of death with a calm, wise, and humorous hand. Advice for Future Corpses is more than a how-to manual or a spiritual bible: it is a graceful compilation of honest and intimate anecdotes based on the deaths Tisdale has witnessed in her work and life, as well as stories from cultures, traditions, and literature around the world. Tisdale explores all the heartbreaking, beautiful, terrifying, confusing, absurd, and even joyful experiences that accompany the work of dying, including: A Good Death: What does it mean to die "a good death"? Can there be more than one kind of good death? What can I do to make my death, or the deaths of my loved ones, good? Communication: What to say and not to say, what to ask, and when, from the dying, loved ones, doctors, and more. Last Months, Weeks, Days, and Hours: What you might expect, physically and emotionally, including the limitations, freedoms, pain, and joy of this unique time. Bodies: What happens to a body after death? What options are available to me after my death, and how do I choose--and make sure my wishes are followed? Grief: "Grief is the story that must be told over and over...Grief is the breath after the last one." Beautifully written and compulsively readable, Advice for Future Corpses offers the resources and reassurance that we all need for planning the ends of our lives, and is essential reading for future corpses everywhere. "Sallie Tisdale's elegantly understated new book pretends to be a user's guide when in fact it's a profound meditation" (David Shields, bestselling author of Reality Hunger).

An assessment of cancer addresses both the courageous battles against the disease and the misperceptions and hubris that have compromised modern understandings, providing coverage of such topics as ancient-world surgeries and the development of present-day treatments. Reprint. Best-selling winner of the Pulitzer Prize. Includes reading-group guide.

The award-winning book that inspired an Apple Original series from Apple TV+ · Pulitzer Prize winner Sheri Fink's landmark investigation of patient deaths at a New Orleans hospital ravaged by Hurricane Katrina--and her suspenseful portrayal of the quest for truth and justice. In the tradition of the best investigative journalism, physician and reporter Sheri Fink reconstructs 5 days at Memorial Medical Center and draws the reader into the lives of those who struggled mightily to survive and maintain life amid chaos. After Katrina struck and the floodwaters rose, the power failed, and the heat climbed, exhausted caregivers chose to designate certain patients last for rescue. Months later, a doctor and two nurses were arrested and accused of injecting some of those patients with life-ending drugs. Five Days at Memorial, the culmination of six years of reporting, unspools the mystery of what happened in those days, bringing the reader into a hospital fighting for its life and into a conversation about the most terrifying form of health care rationing. In a voice at once involving and fair, masterful and intimate, Fink exposes the hidden dilemmas of end-of-life care and reveals just how ill-prepared we are for the impact of large-scale disasters--and how we can do better. A remarkable book, engrossing from start to finish, Five Days at Memorial radically transforms your understanding of human nature in crisis. One of The New York Times' Best Ten Books of the Year

A nationally recognized expert describes seven widespread assumptions that encourage excessive, often ineffective, and sometimes harmful medical care--for fans of Overdiagnosed and Malcolm Gladwell You might think the biggest problem in medical care is that it costs too much. Or that health insurance is too expensive, too uneven, too complicated--and gives you too many forms to fill out. But the central problem is that too much medical care has too little value. Dr. H. Gilbert Welch is worried about too much medical care. He doesn't deny that some people get too little medical care--rather than the conventional concern about "too little" needs to be balanced with a concern about "too much": too many people being made to worry about diseases they don't have and are at only average risk to get; too many people being tested and exposed to the harmful effects of the testing process; too many people being subjected to treatments they don't need or can't benefit from. The American public has been sold the idea that seeking medical care is one of the most important steps to maintain wellness. Surprisingly, medical care is not, in fact, well correlated with good health. More medicine does not equal more health; in reality the opposite may be true. In Less Medicine, More Health, Dr. Welch pushes against established wisdom and suggests that medical care can be too aggressive. Drawing on his twenty-five years of medical practice and research, he notes that while economics and lawyers contribute to the excesses of American medicine, the problem is essentially created when the general public clings to these powerful assumptions about the value of tests and treatments--a number of which are just plain wrong. By telling fascinating (and occasionally amusing) stories backed by reliable data, Dr. Welch challenges patients and the health-care establishment to rethink some very fundamental practices. His provocative prescriptions hold the potential to save money and, more important, improve health outcomes for us all.

For readers of Being Mortal and Modern Death, an ICU and Palliative Care specialist offers a framework for a better way to exit life that will change our medical culture at the deepest level In medical school, no one teaches you how to let a patient die. Jessica Zitter became a doctor because she wanted to be a hero. She elected to specialize in critical care--to become an ICU physician--and imagined herself swooping in to rescue patients from the brink of death. But then during her first code she found herself cracking the ribs of a patient so old and frail it was unimaginable he would ever come back to life. She began to question her choice. Extreme Measures charts Zitter's journey from wanting to be one kind of hero to becoming another--a doctor who prioritizes the patient's values and preferences in an environment where the default choice is the extreme use of technology. In our current medical culture, the old and the ill are put on what she terms the End-of-Life Conveyor belt. They are intubated, catheterized, and even shelved away in care facilities to suffer their final days alone, confused, and often in pain. In her work Zitter has learned what patients fear more than death itself: the prospect of dying badly. She builds bridges between patients and caregivers, formulates plans to allay patients' pain and anxiety, and enlists the support of loved ones so that life can end well, even beautifully. Filled with rich patient stories that make a compelling medical narrative, Extreme Measures enlarges the national conversation as it thoughtfully and compassionately examines an experience that defines being human.

'You will not find a better, more balanced or up-to-date take on either the origin of life or synthetic biology. Essential reading' Observer Creation by Adam Rutherford tells the entire spellbinding story of life in two gripping narratives. 'Prepare to be astounded. There are moments when this book is so gripping it reads like a thriller' Mail on Sunday The Origin of Life is a four-billion-year detective story that uses the latest science to explain what life is and where it first came from, dealing with life's biggest questions and arriving at a thrilling answer. 'A superbly written explanation' Brian Cox The Future of Life introduces an extraordinary technological revolution: 'synthetic biology', the ability to create entirely new life forms within the lab. Adam Rutherford explains how this remarkable innovation works and presents a powerful argument for its benefit to humankind. 'The reader's sense of awe at the well-nigh inconceivable nature of nature is suitably awakened. The extraordinary science and Rutherford's argument are worth every reader's scrutiny. Fascinating' Sunday Telegraph 'One of the most eloquent and genuinely thoughtful books on science over the past decade. You will not find a better, more balanced or up-to-date take on the origin of life or synthetic biology. Essential reading for anyone interested in the coming revolution, which could indeed rival the Industrial Revolution or the internet' Observer 'The perfect primer on the past and future of DNA' Guardian 'Susenseful, erudite and thrilling' Prospect 'A witty, engaging and eye-opening explanation of the basic units of life, right back to our common ancestors and on to their incredible synthetic future. The mark of a really good science book, it shows that the questions we still have are just as exciting as the answers we already know' Dara O Briain 'This is a quite delightful two-books-in-one. Rutherford's lightness of touch in describing the dizzying complexity of life at the cellular level in The Origin of Life only serves to emphasize the sheer scale and ambition of the emerging field of synthetic biology' Jim Al Khalili 'A fascinating glimpse into our past and future. Rutherford's illuminating book is full of optimism about what we might be able to achieve' Sunday Times 'Fresh, original and excellent. An eye-opening look at how we are modifying and constructing life. Totally fascinating' PopularScience.co.uk 'In this book of two halves, Rutherford tells the epic history of life on earth, and eloquently argues the case for embracing technology which allows us to become biological designers' Alice Roberts 'An engaging account of both the mystery of life's origin and its impending resolution as well as a fascinating glimpse of the impending birth of a new, synthetic biology' Matt Ridley, author of Genome 'I warmly recommend Creation. Rutherford's academic background in genetics gives him a firm grasp of the intricacies of biochemistry - and he translates these superbly into clear English' Financial Times Dr Adam Rutherford is a geneticist, writer and broadcaster. He presents BBC Radio 4's weekly programme Inside Science and his documentaries include the award-winning series The Cell (BBC4), The Gene Code (BBC4), Horizon: 'Playing God' (BBC2) as well as numerous other programmes for BBC Radio 4. This is his first book. TGTCGTGAAGCTACTATTAAAAATGCCACAGTGAAGATTAAACCCCGAAAACGGGGTATAAATGGACGGTAAAGTTCCCGACTAACGTGTTAAATG

It's scary and stressful when it happens ... noticing changes in your parent and becoming increasingly worried about their health and safety. Maybe it's Mom leaving the stove on, Dad getting lost on his way home, or unpaid bills that trigger this realization. Or perhaps there have been falls or emergency room visits. Whatever it is, you know something's wrong. You wonder about a diagnosis. And you want your aging parent to accept help, or perhaps move. Helping an older parent can be gratifying. But it's especially hard if they're blowing off your concerns, refusing to make changes, or otherwise resisting your efforts. You want them to listen, but they get upset or withdraw when you try to talk about this. What to do? You don't have to remain stuck in conflict with your parent (or other family members). You don't have to keep getting the runaround from doctors or feel stumped about next steps. Instead, use an expert's clear plan on how to help your aging parent. In this practical, step-by-step guide, geriatrician Leslie Kernisan, MD, walks you through what to do and what to say in order to offer respectful assistance and intervention to a declining elderly parent. Full of actionable advice and insider tips, When Your Aging Parent Needs Help provides practical and flexible steps that move concerned families toward effective elder care action, while respecting a parent's dignity and autonomy. You'll discover: How to communicate with your aging parent to reduce conflicts and enhance cooperation The A-B-C-D-E assessment framework for Alzheimer or other dementia concerns, safety issues, or independent living - and steps to implement change Strategies to overcome parental resistance, health provider reluctance to share information, and family disagreement How to get a medical evaluation for memory loss and, if applicable, a diagnosis for Alzheimer's or another dementia What to know about possible mental "incompetence," powers of attorney, HIPAA, and other options for gaining legal authority as a caregiver How to find geriatric care managers and other eldercare professionals to assist Downloadable worksheets, symptom checkers, and checklists to bring to doctor visits "What this looks like" family stories that show you what these action steps look like in real-world situations Transform good intentions into workable solutions and improved relationships. If you're concerned about an aging parent's health, wellbeing, or safety, you'll find encouragement and direction for this next life stage in When Your Aging Parent Needs Help.
