~~Proportion word problems (practice) | Khan Academy~~

A proportion is a comparison of two ratios. If $a : b = c : d$, then a, b, c, d are said to be in proportion and written as $a:b :: c:d$ or $a/b = c/d$. a, d are called the extremes and b, c are called the means. For a proportion $a:b = c:d$, product of means = product of extremes $b*c = a*d$. Let us take a look at some examples: Question:

~~word problems | K5 ...~~

A good way to work with a ratio is to turn it into a fraction. Be sure to keep the order the same: The first number goes on top of the fraction, and the second number goes on the bottom. You can use a ratio to solve problems by setting up a proportion equation — that is, an equation involving two ratios.
