React in Action Book

Description: React is a highly-performant tool that implements a one-way data flow model. Reasoning about an interface or application written with React ends up

Access Free React In Action

being much easier because it decreases overall complexity for developers working with it. React in Action introduces front-end developers to the React framework and related tools. Readers will work their way from “raw” React towards JSX, and from basic static components to ones that are dynamic and interactive.

Handling forms is about how you handle the data when it changes value or gets submitted. In HTML, form data is usually handled by the DOM. In React, form data is usually handled by the components. When the data is handled by the components, all the data is stored in the component state. You can control changes by adding event handlers in the onChange attribute:

~~React~~

In React, mutable state is typically kept in the state property of components, and only updated with `setState()`. We can combine the two by making the React state be the “single source of truth”. Then the React component that renders a form also controls what happens in that form on subsequent user input.

~~Forms~~ ~~React~~

Redux in Action is an

Access Free React In Action

accessible guide to effectively managing state in web applications. Built around common use cases, this practical book starts with a simple task-management application built in React. You'll use the app to learn the Redux workflow, handle asynchronous actions, and get your hands on the Redux developer tools.

~~Manning | Redux in Action~~

The law of action-reaction (Newton's third law) explains the nature of the forces between the two interacting objects. According to the law, the force exerted by object 1 upon object 2 is equal in

Access Free React In Action

magnitude and opposite in direction to the force exerted by object 2 upon object 1.

~~The Law of Action Reaction (Revisited) — Physics Classroom~~

React-in-Action isn't a good book. It is too wordy, gets too in to theory too early, and the first few chapters rely on executing code in a sandbox environment which is something I don't personally care for. No one gets paid to use technology in CodePen (or whatever.)

~~Thomas, Mark ...~~

A stateful React component is a JavaScript class (with React hooks that's no longer the case). In a React

Access Free React In Action

component the state holds data which can be rendered to the user. The state in React could also change in response to actions and events: in fact you can update the local component's state with `this.setState ()`.
