The Problem With Shrimp Shrimp farming releases huge quantities of greenhouse gases, in addition to supporting abusive labor practices. Ethan Miller/Getty Images. In 2015, ...

[The Problem With Shrimp | The New Republic](#)

Intensive shrimp farming is considered one of the most unsustainable forms of aquaculture. Aside from being responsible for mangrove deforestation, this system relies heavily on industrial fishmeal, and the discharges from intensive farms, usually full of waste and bacteria (and also frequently, antibiotics for treating shrimp diseases developed in these choked and overpopulated farms) pollute adjacent rivers.

ADM Animal Nutrition has launched a new shrimp production concept, based on innovative techniques involving feeding, biosecurity, water treatment, aeration system and digitisation. The concept, called BIOSIPEC, was launched at the recent Asian-Pacific Aquaculture event in Chennai.

[ADM launches new shrimp farming system | The Fish Site](#)

Crop failures due to disease outbreaks have occurred in several shrimp farming countries, and, along with other macroeconomic factors, have introduced an element of uncertainty in the market, with resulting price fluctuations. These fluctuations may be detrimental to the sustainability of shrimp farming.

[Shrimp Farming and the Environment](#)

government employees of the shrimp farming areas. To gauge the prospects of shrimp farming, the south-western region of Bangladesh has been considered as the core farming areas. These three categories of stakeholders are related to the problems and prospects of shrimp industry in Bangladesh. A total of 100 stakeholders were selected to respond.

[Problems and Prospects of Shrimp Farming in Bangladesh](#)

The effects of this are mixed, though, and the problems are not unique to shrimp farming. Changes in the distribution of wealth tend to induce changes in the power structure within a community. In some cases, there is a widening gap between the general population and local elites who have easier access to credits, subsidies, and permits and thus are more likely to become shrimp farmers and benefit more. [83]

[Marine shrimp farming - Wikipedia](#)

Moisture rises between the corrugated metal walls. The shrimp and water-bound microorganisms need the heat supplied from the district-heating network. And UV lamps hanging over the plastic covered cultivation tanks stimulate algae growth. The newly arrived shrimp larvae are quiet and hiding in an impenetrable brown and green biomass.
