The Soft Tissue Release (STR) technique works by changing the origin and insertion points of muscles, before stretching the tissues. The muscles origin and insertion points are altered by the practitioner applying a "soft tissue lock" to the tissues under treatment. Once the "soft tissue lock" is applied the tissues are then stretched.

How soft tissue release works - Human Kinetics

Soft tissue release is a massage technique that combines manipulation with localised stretching of the tissue. The technique can either be done passively with a therapist applying pressure to the muscle, fascia or tendon whilst performing a stretch to the associated tissue or actively where the therapist just applies the pressure and the patient then

actively stretches the muscle.
