For example, if you read Boothby to know what a covariant derivative is, then you can skip the whole part about integration on a manifold. Here are detailed points. 1. In the first some early sections, the author gives his effort to explain the difference between  $\mathbb{R}^n$  and n-dimensional Euclidean space.

manifold as a subset of a Euclidean space. This has the disadvantage of making quotient manifolds such as projective spaces difficult to understand. My solution is to make the first four sections of the book independent of point-set topology and to place the necessary point-set topology in an appendix. While reading the first

In my experience, if written solutions to problems are available, even the most conscientious students find it very hard to resist the temptation to look at the solutions as soon as they get stuck. But it is exactly at that stage of being stuck that students learn most effectively, by struggling to get unstuck and eventually finding a path through the thicket. Reading someone else's solution ...
