Linear Inequalities

Solution: (i) Given that $24x < 100$. Now we have to divide the inequality by 24 then we get $x < 25/6$. Now when x is a natural integer then. It is clear that the only natural number less than $25/6$ are 1, 2, 3, 4. Thus, 1, 2, 3, 4 will be the solution of the given inequality when x is a natural number.

Linear Inequalities

inequalities are entire regions of points. You can verify whether a point is a solution to a system of linear inequalities in the same way you verify whether a point is a solution to a system of equations. Systems of inequalities can have no solutions when boundary lines are parallel.

Solving Systems of Linear Inequalities
You'll Remember ...

Solving Inequalities Solving linear inequalities is almost exactly like solving linear equations. Solve $x + 3 < 0$. If they'd given me " $x + 3 = 0$ ", I'd have known how to solve: I would have subtracted 3 from both sides.
