One-step inequalities are very easy to solve. They are very similar to one-step equations when it comes to the solving procedure. The biggest difference is that, while the solution of an equation is one number, the solution of an inequality is often a large group of numbers. For instance, let us say you have to solve an inequality that looks like this:

Since we ' ve already learned what inequalities are, and we know the rules and symbols, we ' ll concentrate on learning how to solve one-step inequalities through several examples. So, let ' s get started! Example 1: Find the set of solutions for following inequality:  $x + 3 < 5$  To solve any inequality, we need to “ isolate the variable on one side ” . We can subtract the number  $3$  from both sides and then solve the expression on the right side.
