How to get better at solving statics problems — Quora

Maple has at least four properties which make it very useful in problem solving. That means that you can type in commands and execute them, just like in the languages Basic and Logo. A Maple command is simply a string of characters ending in a semicolon ';' or colon ':'. For example, the command $> 2+5,$
 $\text{factor}(x^2+5*x$
 $+6),\text{expand}((x+y)^2);$

Statics Example: Calculations on Beams. by Harald Kammerer, maple@jademountain.de. Here are some examples of calculations on beams. We consider individual beams with different boundary conditions, continuous beams with rigid and with elastic supports and articulated girders. In the examples of individual beams, influence lines are also considered.

Maple will also offer hints or show the next step, if asked. The tutor doesn't only demonstrate how to obtain the result, but is designed for practicing and learning. For this blog post, I'd like to focus in on an area of great interest to students: showing step-by-step solutions for a variety of problems in Maple.
