Based on the values of p and q , calculate the percentages of the DD and Dd genotypes: DD Dd.
Check: If a population is in Hardy-Weinberg equilibrium, genotype percentages will remain stable over time. Set DD to the value given in part D above and dd to 16%. Run several generations in the Gizmo.

Manipulate: The Hardy-Weinberg equation is $p^2 + 2pq + q^2 = 1$, where p = probability of D, q = probability of d, p^2 = probability of DD, $2pq$ = probability of Dd, and q^2 = probability of dd. Look under Show Hardy-Weinberg quantities.

Hardy Weinberg Equilibrium Gizmo Answer
Hardy-Weinberg principle – principle stating that the proportions of different alleles and genotypes in a population will remain stable as long as certain conditions are met. The Hardy-Weinberg principle applies to large populations in which mating is random, there is no migration, no mutations are occurring, and natural selection is not occurring for the alleles in question.
